This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 21 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Agenda for proposed personal interview

In a telephone call on August 22, 2006, Examiner Gold requested that Applicants submit an agenda of proposed topics for review. Applicants request that these topics be discussed at a personal interview to be held on September 11 @ 1:30 pm.

1. Difference between the claimed “different pre-defined group of network configuration settings” and Rehkopf’s a different combinations of a floating variables and fixed system performance variables.
2. Potential clarifying claim language for claims 7 and 34 if no agreement can be reached on the patentability of the difference highlighted in topic 1, but an agreement can be reached on potentially patentably distinguishing clarifying claim language.
3. Use of newly applied Eceasty reference to meet step (e) limitation in claims 13 and 40 wherein network configuration settings and aggregate test results associated with other client machines are used for optimizing network configuration settings for a user’s client machine.
 - a. Eceasty relates to aggregating past content selections of users so as to configure an endpoint server with content that is most likely to be requested.
 - b. Difference between using aggregation concepts for content selection queuing vs. using aggregation concepts for selecting network configuration settings.
